Secrets of the Lost Tomb: README

This game is relatively simple to navigate. There is a story mode and multiplayer mode.

Story Mode:

There will be multiple levels and hours of immersive gameplay. Controls may vary between levels, so pressing the “m” key will always help with bringing up a control menu. Your progress will always be saved, but you may need to restart particular levels if you quit out of the game. Using the Esc key or the Tab key will generally bring up a helpful menu as well. The objective of the story mode is to complete the mission assigned to you by the government and uncover the secrets that are within an ancient tomb.

Multiplayer Mode:

There are two subsections of the multiplayer mode, the battle royale section and the mission section.

Battle Royale:
In the battle royale mode, you will be able to battle against your friends. One person will have to host a server that will accept up to 5 people. The host must press “enter” to begin the game. The objective is to be the last player standing. There are health kits, ammo, and various guns throughout the battle arena.

Mission:
The mission map is very similar to the battle royale, however you will be playing with your friends instead of against them. There are various enemies throughout the battle arena, and your team must try to defeat the enemies and exit the arena in the shortest time possible. Each time a team member dies, time is added to your team’s total time. You can keep track of your personal best time and try to beat it! Similar to the battle royale mode, the host must press “enter” to begin the timer countdown for your team.
