Main menu

Controlling

You can move the player with the keyboard or mouse

With the keyboard, you use the curser-keys or the keys WASD to move the player. Additionally, you can use these shortcuts in the game:

SPACE	Fire weapon (if you own one!)
I	Inventory open/close
Enter / F	Take item / talk to person
1-5	Use item in Inventory slot 1-5

When you talking to a person, you have to choose a one with the mouse from the given answers.

With a mouse click you can skip/end text.

When playing with the mouse, you can use all the buttons by clicking them. If you want to move the player with mouse, select the mouse-button in the upper icons and four on-screen-buttons will appear.

Energy

There are three states of Energy.

100% Healthy 50% Attention! 0% Dead

You can find health-packs (within the game) but only use them if you have 50% energy left.

Items

You can interact with items, if they are highlighted in dark green. For example, a gun or a health-pack can be taken. Other marked items can interact with an item of your inventory.

Save slot

There is only one save slot. If you start a new game, this slot will be overwritten.

To be honest, the game is challenging, that's the fact.

Anyway, have fun.

:)
