Patient Introduction

Mr.Stiles is a patient from the feeder psychiatric institution. He is diagnosed with schizophrenia, major depressive disorder, bipolar disorder, and generalized anxiety disorder. He is being introduced to the lab for the testing of many of his psychological illnesses.

Test Introduction

A new drug, name undefined, is being tested on subject. The substance aims to cure any psychological defects or illnesses. The substance does not show any signs of unintentional results, but only testing will prove this theory correct.
If all goes well, the drug will be distributed to foreign agencies for extreme profit.
