Amends

Short Introduction :

“Amends” is an interactive VR experience about the chaotic emotions of a past connected to a relationship with a now estranged mother. You will through the perspective of a child revisit the memories of your upbringing and through time get to relive the complicated emotional relationship, which still awaits its resolution.

Runtime :	10 - 13 min
Platform :	Oculus Rift & VIVE
Type of experience :	Room Scale
Optimal space :	Minimum 2 x 2 meters, optimal 3 x 3 meters
Interactable :	Yes
Hand Controllers :	Required
Minimum PC configurations required :	- Memory : 16 GB - Processor : Intel Core i7 - Ports: 2X USB 3.0, 1X Displayport (Vive Pro) or 1X HDMI (Vive / Oculus Rift) - Graphic card : GTX 1060
Softwares required :	- Steam VR, downloaded on Steam. - Oculus App, (*if using the Oculus)*

Instructions to launch the build :

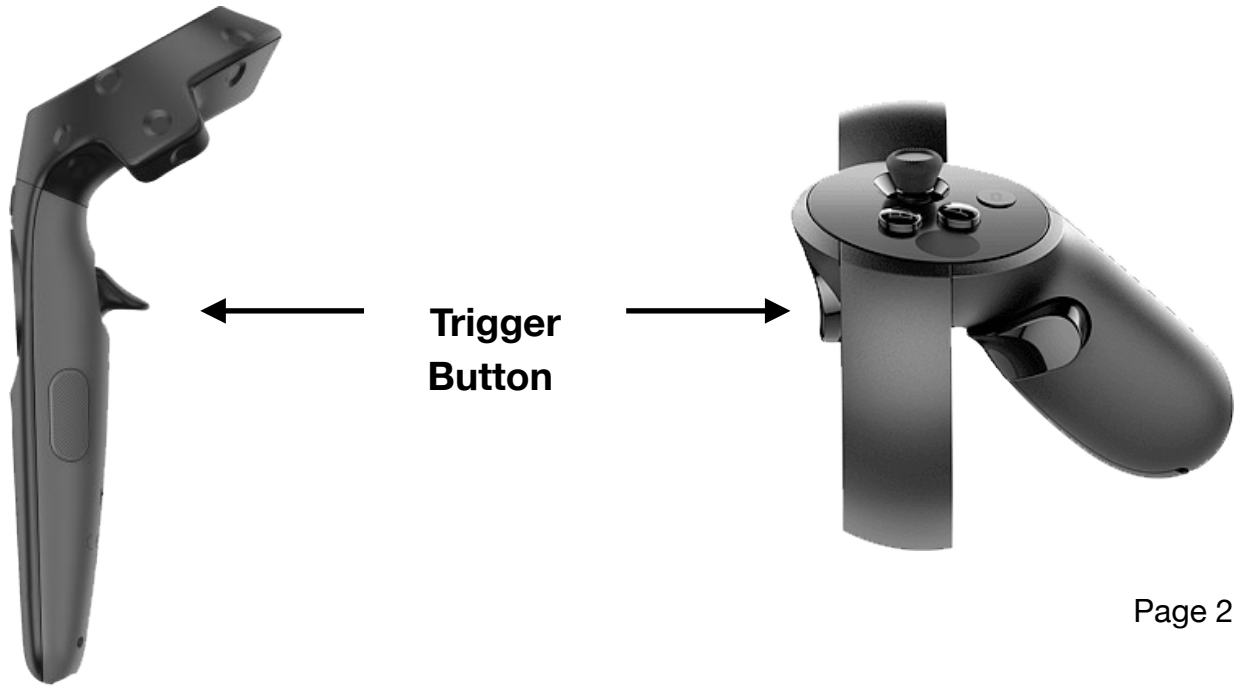

- Download the experience from the FTP server.
- Copy our package on your PC.
- Open Steam VR and make sure the equipment is green lit.
- Be sure to wake up controllers before handing them to the user.
- Explain to the user, the buttons they will be needing to interact.
- Prepare the user by equipping headset and handing controllers.
- double-click on **Amends.exe**, found in the Amends folder.
- Amends is experienced in a standing position.

- To **restart** either let credits play out and press **SPACE** once to get it ready for the next user (Screen turns black), and then **SPACE** again when the new user is ready, or press **ESCAPE / Alt + F4** to quit Amends and then relaunch Amends.exe.

Interacting :

There is only one button the user needs to know about, the button for interaction, the **trigger button** shown below on both the VIVE and Oculus controller.

Hold button to grab and **Release button to let go**

Headphones :

In a noisy environment we highly recommend to remove default Oculus headphones from Rift and use noise-cancelling headphones (such as Bose QuietComfort 35).
We have found that the wired connection is more reliable than the Bluetooth connection.

Troubleshooting :

- If you find that you are in the floor when running the experience, recalibrate your setup and restart Steam VR and Oculus App.

- If the project starts, you hear audio but in the headset nothing appears except for the words “UnknownSource”. Your setup’s security is blocking non-Oculus store applications. Please follow these instructions to remedy: https://support.oculus.com/632287656943461/

- If your system shows an Oculus error code please consult this webpage: https://www.windowscentral.com/how-fix-most-common-oculus-rift-error-codes

- Error code 8603 (all 860X) is the most common error and tends to be USB cable and port related. First try rearranging the ports and try using different extension cables.
