Known Issues/Bugs:
If you leave the CCTV monitor on the FPS drops significantly. To counter this just turn it off when you're done looking at it.
If you're having trouble running it change the graphics to very low as I modified the lowest end settings to increase FPS as much as I can.
Sometimes pistols may stop shooting when very low on ammo
Some hardware combinations has been known to have FPS drops on specific chapters, this is something I can't fix.
There are no saving features, this is intentional as well as time saving for a solo developer. Perma death is something I like in games.
Bloom and ambient occlusion options can be found in the "Graphics" tab in the main menu. Or in the "General" tab in game.
Running into teleporters while being attacked will lead to your player being stuck in a "teleport loop" - I've been looking for a fix.

If you find anymore issues let me know!
