Supported Platforms

VR headsets: HTC Vive, Vive Pro, Valve Index, Oculus Rift, Windows Mixed Reality

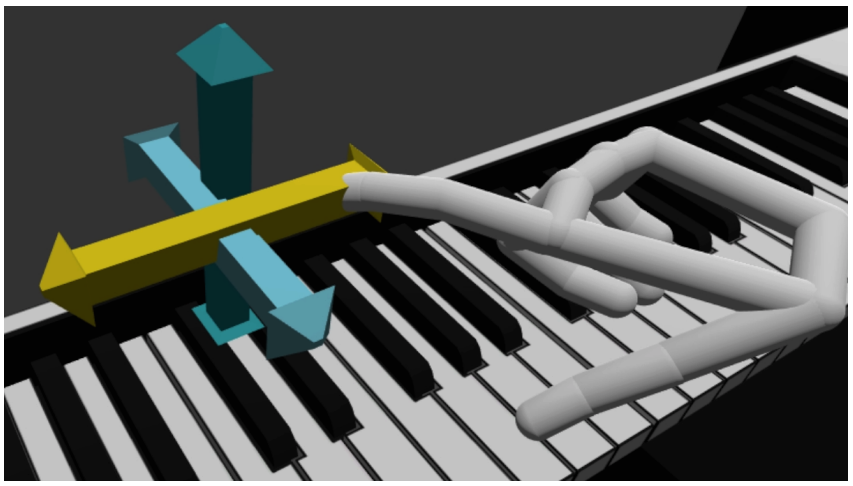

Optional HW: Leap Motion Controller (Place it on your VR headset and plug it into your computer – hand tracking will be used instead of classic VR controllers)

Piano Setup

After you start the game for the first time, you should see this setup scene:

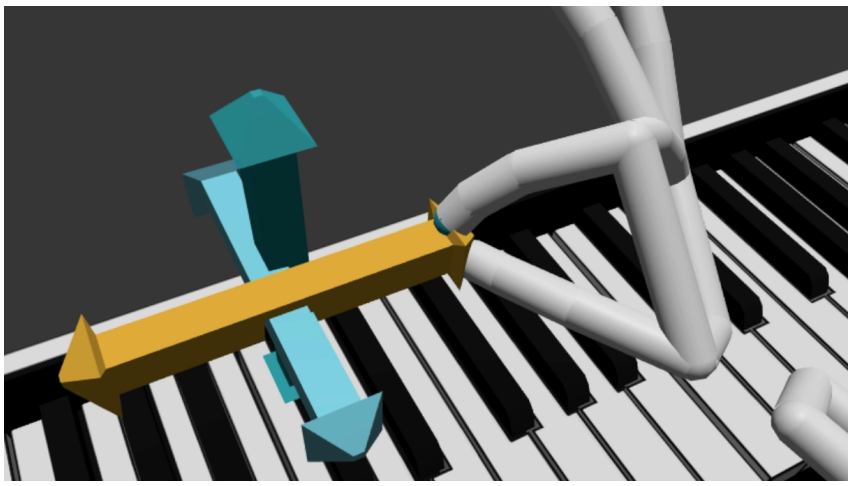

Step 1: Touch the arrow with the **tip of the index** of your virtual hand, **press the trigger button** and adjust the piano position. (This is the only time when you will need a controller button for this game - the rest is controlled only by touching virtual screens and virtual piano)

Adjust virtual piano position with VR controller by pressing the trigger button

If you are using Leap Motion controller you can move with the arrow by using this gesture:

Adjust virtual piano position with Leap Motion Controller

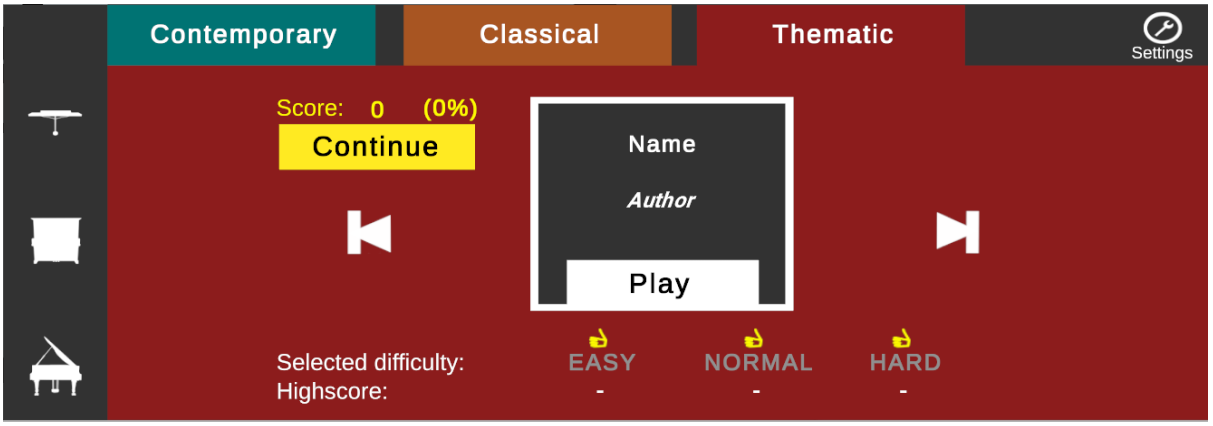

Step 2: Confirm the selected piano position by touching the **Confirm** button.

You can always return to this setup scene from the **Settings Menu** or from the **Options Screen** (display with ESC - more below).

Song Menu

In the song menu, you can choose from multiple songs in:

- **3 categories** - Contemporary, Classical, Thematic
- **3 difficulty levels** - EASY, NORMAL, HARD

Song Menu - Choose category, difficulty and start to play the selected song

You can control the menu by touching the option you want to choose, you confirm your selection by touching the white "**Play**" button, which will start the song.

After the song ends, this menu won't start automatically - you can display it by touching the **"Pause"** mark on the right side of your virtual piano:

Pause symbol

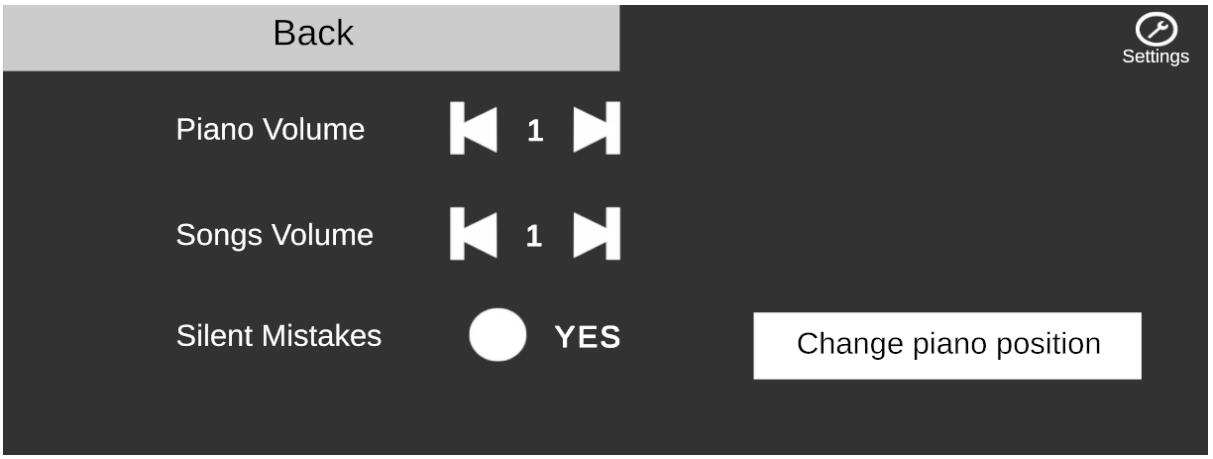

Three piano symbols on the left side of the Song Menu are accessible only after you have unlocked all possible songs and virtual rooms - then you can change freely the virtual surroundings by touching one of these three options.

The **"Settings"** button on the top right corner will display the **Settings Menu**.

Settings Menu

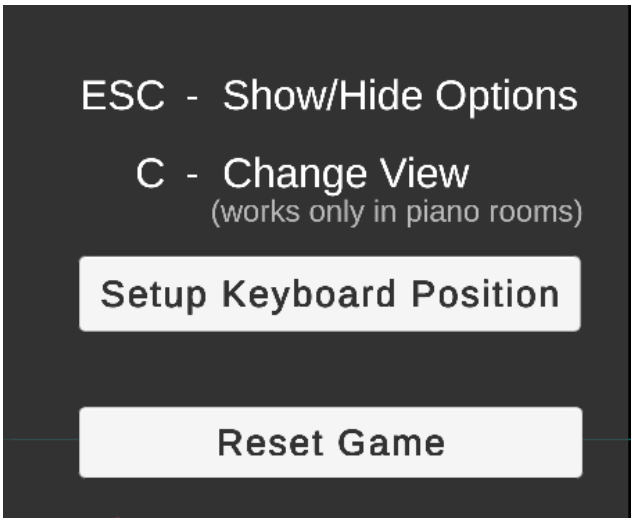

In the settings menu, you can set up the piano volume and songs volume (the volume of the background music).

- **Silent Mistakes** - when set to “YES”, all keys on your virtual piano will remain silent when they don’t need to be pressed according to circle instructions (see more in How to Play)
- **Change piano position** - goes to the piano setup scene (more on Piano Setup)

Setting Menu - Set piano volume, song volume or go to the setup scene

Options Screen

Options Screen

In VR Pianist, two keys on your PC keyboard can be used:

- **ESC:** By pressing “ESC” you can display or hide the Options Screen
- **C:** By pressing “C” you can change the view which displays on your monitor (the view on your VR headset will remain the same) - this option works only in playing scenes, not in a piano setup scene

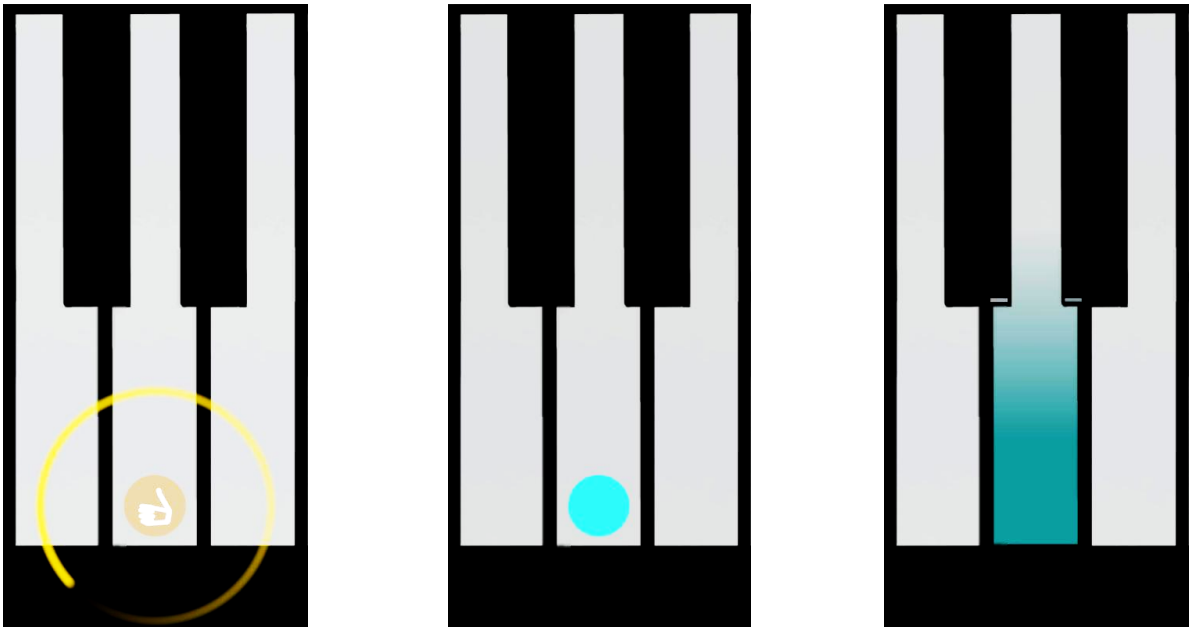

You can go to the setup scene anytime during the game by mouse click on “Setup Keyboard Position” and you can also “Reset Game”, which will !delete all your progress! and the game will start from the beginning.

How to Play

Your task is to play missing notes according to circle instructions:

- When a circle appears above the keyboard - get **READY**, the key should be pressed soon
- Right after the inner circle changes colour **PRESS** this key (not before - take it as a traffic light, change of colour means: GO)
- **HOLD** the key until it is white again

READY **PRESS** **HOLD**

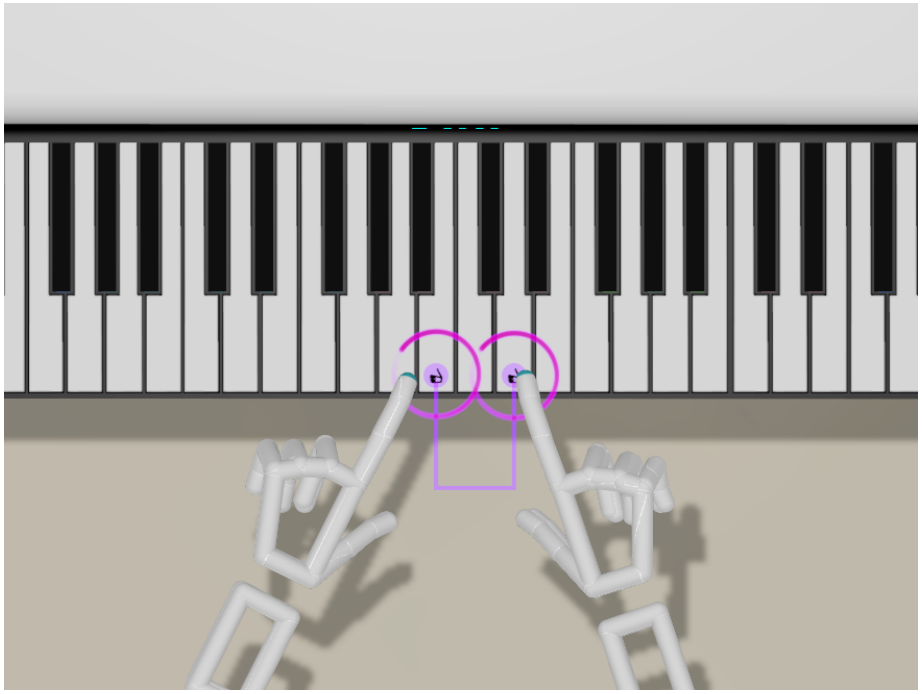

When there are multiple circles - you can look at their sizes - the smaller outer circle belongs to a key that needs to be pressed sooner. The first key is always highlighted with this **“THUMBS UP” mark**:

“THUMBS UP” mark

When there are two circles of the same size and they are connected like this:

Press two keys together

It means they should be **pressed together** (both these keys will have a “THUMBS UP” mark).

Thanks for reading and enjoy the game!

And don’t forget to review the game on Steam :)
