

REVELATION

QUICKSTART GUIDE

The objective of Revelation is to unlock all locks by matching arrow colors with corresponding wheel colors. There are wheels that the player can rotate and all wheels will rotate clockwise if two colors are matched. The player loses if they run out of time or trigger any alarms (indicated by flashing red circles). Each player has 4 lives. Be on the lookout for different power-ups that can be picked up during gameplay!

Multiplayer mode is also available! Each player will play until they lose a life. Then the second player will be able to play until they lose a life. Players can also skip to certain levels if they have certain passwords. Passwords are revealed to players every tenth level that they defeat.

CONTROLS AND SHORTCUTS

- P Key - Up
- L Key - Down
- Z Key - Left/Counterclockwise
- X Key - Right/Clockwise
- Space Bar - Select moveable wheel or powerup
- Q Key - Quit game (during gameplay only)

POWERUPS

- Adds 30 seconds to the countdown timer

- Resets the level with current time remaining

- Stops the countdown timer until the player grabs another wheel

DOSBOX TIPS

To make this game playable on modern systems, this version of Revelation is played through DOSBox. Launch options from Steam are included for full screen and multiple windowed resolutions.

USEFUL DOSBOX SHORTCUTS

- Exit the application at any time with Control+F9.
- While in windowed mode, Control+F10 toggles locking the mouse to the window. This prevents the cursor from wandering outside the game window during gameplay.
- Alt+Enter can be used to switch between windowed and full screen mode while in any resolution view.
- If you feel the game is running too fast or too slow, you can adjust the CPU speed by decreasing the number of CPU cycles with Control+F11 or increasing them with Control+F12.

DOSBOX OPTIMIZATIONS (RECOMMENDED FOR ADVANCED USERS)

You can make adjustments to how the game runs at each configured resolution by editing the .conf files in the DOSBox\Configuration directory of the game's install folder. General emulation settings can also be adjusted in the dosbox.conf file, which affects all resolutions. We recommend backing up any .conf files before making edits, as changes to these files could produce undesired effects.

FULL SCREEN MODE

If you are having trouble running the game at full screen, you may want to change the fullresolution parameter in the fullscreen.conf (and any other .conf files you use to launch the game). We found that most systems run best with this parameter set to fullresolution=desktop, so we made this the default value, but we have seen some configurations (like the Surface Pro X) where changing this parameter to fullresolution=original was necessary for the game to run properly.
