1. For Win User, you can just download the DLC game, then play the main game, then you can choose the DLC.

2. For Mac User, you should find the folder 'mac' (this folder is in the root of the game 'Drop one NPC to another')
 and in that folder it called 'macGame.app', and you have to give the permision to let it run!

3. For Linux or SteamOS or Ubuntu Users, you should find the folder 'linux' (this folder is in the root of the game 'Drop one NPC to another')
, you should use terminal cd in the folder 'linux',
 to run the game (Do not click it to run), you should then type ./girlfriendPredictor.x86_64 and press Enter Key
