Stategy Guide

Kexxran Enemy Strength
Gray = Weakest
Red = Stronger
Blue = Strongest
Partially Transparent = ???

Tips

- Listening to the story in the main menu or pause menu will help you find something with "a bright red glow."

- Dashing is a very useful skill that can help you get to places you wouldn't be able to go by simply running and jumping.

- When you see a bluish purple glowing orb, that is an area you can save the game.

- For the alternate ending, it's recommended to save the game first. In the save game room, you'll have an opportunity to obtain the mysterious object that extends the story and changes the final outcome of the game... as long as you make it!

- Sword combos triggered by fully charging the green sword charge bar deal much damage without much effort. But, sword combos can be interrupted by an enemy attack so timing is key.

- The Whirlwind Sword Combo triggered by swinging the sword 6 times in a row (LMB, F or PS5 X) cannot be interrupted by an enemy. But, the enemy can interrupt a sword swing if the Whirlwind Combo has yet to start.

Defeating Red Kexxran Beasts

** Hold the keyboard "Z" or PS5 "O" button to start charging your sword. Once the green charge bar is full, release the button at just the right time to destroy these enemies quickly with a sword combo attack.*

** Another way to destroy these enemies is by swinging at them once and running away. Wait until they get tired from swinging they're axes and take a break. During their break, run over to swing at them again and repeat this process.*

Defeating the Red Kexxran Boss

** Attacking this enemy from behind is the most effective way to defeat him. (Note - You cannot get behind the blue alt ending boss!)*

** Dashing is vital for evading his multi-strike attacks.*

** Hiding behind the large rock in this area is a great tactical strategy.*

** For more of a challenge, try defeating this enemy from the front!*
