Readme :: Volvox :: Neotenia

Game controls

A, D, Left, Right:	move Trimoeba
Alt gr, Spacebar, Mouse:	select Trimoeba
R:	restart level
X, C, V, B:	quick access to Trimoebas' actions
Esc:	exit

Useful options

Prucence:	in this mode a Trimoeba will stop after each movement, to control her better
Touch:	in the touch modes two arrow-shaped buttons will appear on the screen
Drag:	allow you to move Trimoebas dragging them
Accelerometer	if your device supports accelerometer you can tilt it to control Trimoebas
Tutorial:	you can turn the tutorial on, off, or on only the first time you play

About Login and Synchronization

Volvox is provided of an autonomous synchronization system in addition to the Steam Cloud. It can be used both to synchronize your play status and achievements with the upcoming mobile version and for additional data backup. It is theorically possible that the files on disk get corrupted for any reason, corrupting the cloud version too. Even in this situations the Neotenia's server will keep your data because the version stored here is purely incremental. Synchronization requires a valid mail (not necessarily related to Steam) and a proof of purchase (automatically provided to Steam users).

Processing sensitive data

A valid mail adress is required to use the Neotenia's Synchronization. Neotenia will not share your personal data with third party. Neotenia could notify a new product's launch via mail (2-3 times at year; this is not a regular newsletter). You can unsubscribe from this service using a link provided in this kind of mail.

Quick troubleshooting:

- On Windows, the windowed mode in the past caused random lack of backgrounds in PCs with lower graphic prestations. In this case please report the problem to info@neotenia.org and use fullscreen mode.
- On Mac, the windowed mode sometimes conflicts with the Steam Overlay and the window content becomes a plain color. In this case please disable the Steam Overlay for this application or turn to fullscreen mode.
