BASICS

Welcome to Cyber Complex. In this game you control a virtual Hack Kit called the «H4C-Kit» to hack trough the Cyber Complex.

This is how your H4C-Kit looks on the logical Grid

You can move the «H4C-Kit» in 4 Directions with the Controllers Left Analog Stick or it's digital pad.

GOAL

The goal of each Stage is to capture all Units and to destroy all A.S.S.A Scanner or Boss Units. Everything RED needs to be destroyed or captured to turn BLUE.

NEW GAME

To Start a new game, choose play in the main menu. In the gamemode selection screen you can select between 2 Singleplayer <Campaign> - <Survival> and Multiplayer modes.

For new Players, we recommend to start with the Campaign, where a tutorial explains the game basics step by step.

Campaign

The Campaign Mode lets unveil the V-Eye Cyber Complex conspiracy. It combines a Story with 2x35 Campaign Stages to hack through. Every completed Stage will unlock a new one. Unlocked Stages can be replayed to get a better Time.

Survival

In the Survival mode you need to fight as many random generated Systems as possible. Your score increase twice with every new stage you complete successfully.

MULTIPLAYER

Cyber Complex offers 2 player versus and coop modes to play on a single Xbox One. To start a multiplayer session, connect a second Gamepad and select 2P Versus or 2P Coop in the gamemode selection screen.

2P Coop

In this Multiplayer Mode, 2 Players can play together to hack a random generated system. The goal of this mode, is to complete as many stages as possible without loosing the H4C-Kits.

HINT:

In Coop Mode, you can heal each other by moving on the same square. But keep in mind, also the HP of both players will be shared. This means if one player fails, the round is over.

A separate Leaderboard shows the worldwide Coop highscores.

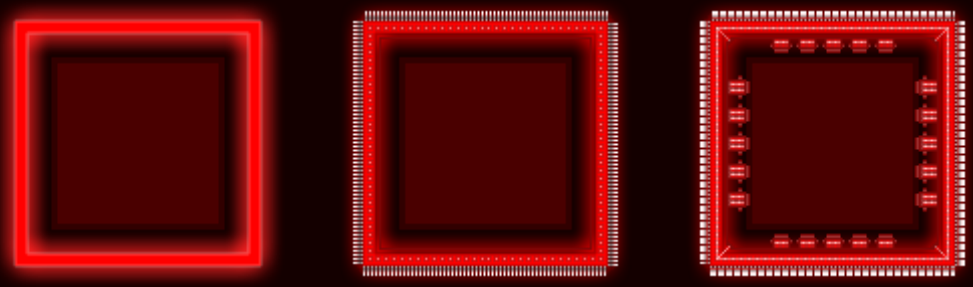

2P Versus

In this mode you can duel with another player. Player 1 is blue, Player 2 is red. When both players collide, both lose the same amount of HP and the player with more HP will win the Round.

CONTROLS

Use the Controllers analog stick or digital pad to move the «H4C-Kit» on the logical grids top down view in 4 directions, LEFT, RIGHT, UP, DOWN.

Hold or Tap the « A » Button Fast to send out spam to capture enemy red units.

With every spam package, the units defense will be lowered by one square. The amount of squares can vary with the unit type and gamemodes.

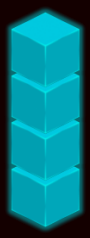

Once the defense of a Cluster has reached zero, the cluster will be captured and turns blue.

MODS

After each hacked Mastersystem, Stage no. 5 in every building you get access to a new mod slot that allows you up to 14 mods.

To enter the mod database, select and confirm this building on the map:

Mods can be changed, un- and re-installed between the Stages to adjust them to match the requirements.

Please read the description in the resistance database view for more details.

USER INTERFACE

EDITOR

Cyber Complex let's you create and play your own stages. Select the editor button in the main menu and select a free slot to proceed.

EDITOR CONTROLS

In the Editor, Objects can be selected with the L/R trigger and/or shoulder buttons or the select button.

Place Objects with Gamepad Button A.

To remove/destroy objects in the Editor, use the B button on the gamepad.
