Installation Help

ON PC

If your anti-virus software flags the game, you'll have to choose an option to "run it anyway", give it permissions, or temporarily disable the anti-virus software. Unfortunately, this is a common issue with Indiedev's and anti-virus software

ON MAC

If it gives you an error, saying it's from an identified developer, right click the file AIRIS and choose Open instead. This time, when the error pops up, it should have an additional button called "Open". You can press that, and the game should run.
