4. Customer Support

---

1. STARTING THE GAME

Click on the Start button and then point to the folder Axelerator.
Within this folder point to

NICE.exe (for 64K colors)
or to **NICE_256.exe** (for 256 colors).

If you experience false colors, point to

NICE _32k.exe (for computers that display **Axelerator** with false colors)
or to **NICE_256_32k.exe** (for computers that display **Axelerator_256** with false colors).

---

2. GAME CONTROLS

F1 Change Camera/View
F2 Track View On/Off
F3 Centrifugal Force On/Off
F4 Driver's Name Display On/Off
F5 Switch Joystick/Keyboard/Steering Wheel/GrandPrix/GamePad

6 or K Ball Bearing Shooter
7 or O Oil Blaster
8 or N Nail Thrower
9 or G Machine Gun
0 or S Repair Set
T Nitrobooster
R Rocket

3. TROUBLE SHOOTING

During the installation of the game the arrow message "Runtime Error" shows up

The computer is operating with MS-DOS compatibility file system. Please look up SETTINGS ->CONTROL PANEL -> SYSTEM ->PERFORMANCE as to why this mode is activated. Please try to deactivate this mode – unfortunately the solution for this mode is different from system to system. The performance of your computer is very good, if you see the message "The system is optimal configured".

After the intro the screen turns black and the computer freezes

Most likely you are using drivers for your graphic card that are not compatible to DirectX3. Please obtain the latest drivers from the manufacturer of your graphic card.

My car is at the start/finish line and the light shows red - a short roar of the engine and nothing happens anymore

The drivers for the sound card are not installed correctly or you are using drivers that are not compatible with DirectX3. Please install the latest drivers for your sound card (DirectX3 compatible).

My car is at the start/finish line and the light turns green – the car is not reacting on any joystick movements

Please calibrate your joystick in the CONTROL PANEL of your Windows95 SETTINGS.

When I try to establish a network connection with another computer I can't configure a protocol (spinning wheel)

This is a bug of DirectX3. Please repeat the installation of DirectX3. After the 3rd or 4th time you should be able to select a protocol.

After starting N.I.C.E. the screen turns black and nothing happens

Please make a new installation of the video compression for Windows95. Go to CONTROL PANEL -> ADD/REMOVE PROGRAMS -> WINDOWS SETUP and doubleclick MULTIMEDIA. Remove the check mark for VIDEO COMPRESSION and restart your computer. Then add the check mark for VIDEO COMPRESSION – you will have to insert your Windows95 CD. Restart your computer one more time.

How can I adjust the sound level of CD-Audio Tracks?

Double-click on the loud speaker icon in the Task Bar at the right bottom of the screen. You will get a new window that gives the option to adjust the sound levels of WAVE and CD-Audio.

TOOL BOX

In our Tool Box you will find additional options that will only be displayed when moving the mouse above the switches. On the dialer of the remote control you will find the button functions. Here you can freely select the button functions to your joystick. On the right bottom corner of the monitor you will find an orange button for game selections. Left of that button there is another switch that will display our support address. Left of the support address you will find the keyboard functions.
