TRANQUILITY BASE MINING COLONY : THE MOON

Welcome to the Moon...

Thank you for purchasing **Tranquility Base Mining Colony: The Moon**
This is the Explorer Version, which encompasses about 17,000 sq. kilometers of realistic lunar terrain. The terrain is a three-dimensional map, using NASA data, which was converted into terrain with a terrain generator. This renders a very realistic rendition of the lunar surface. You will be exploring craters, rilles and mountains as they truly exist on the Moon. You'll experience the beauty of the Moon, as if you were there. Wait until you see the size of Moltke Crater, 6 kilometers across. You'll also be able to enter the Tranquility Base Lunar Reserve Visitor Center, which is the gateway to the Apollo 11 landing site.

Do you like treasure hunts?

- Search and collect gold coins as you explore the game area

Game:

- Starter Arena with gameplay instructions
- Character in spacesuit with jetpack
- 17,000 sq. kilometers of realistic lunar terrain to explore
- The Earth, which spins and shows city lights on the dark side
- The Sun, which illuminates the game area
- The Stars, along with the Milky-Way Galaxy
- Signposts denoting points-of-interest
- Gold coins to collect of varying valuations depending upon your location: The farther you travel the higher the value.

  - 60 FPS: Limits to 60 Frames Per Second.
  - 90 FPS: Limits to 90 Frames Per Second.
  - 120 FPS: Limits to 120 Frames Per Second.
  - Unlimited: No Limitations

Left-Click on SAVE SETTINGS when prompted

Tip: For the best user experience:

- *Set the ADVANCED & VIDEO settings to the highest level that your computer system will allow without performance issues.*
- *If you experience performance issues reduce some or all of your ADVANCED or VIDEO settings to a lower level. FRAME RATE LIMIT & ANTI-ALIASING are good places to start. You will need to experiment with these to find a combination that best suits your system.*

Tip: If Game window is Borderless and you wish to move to another monitor follow these steps:

1. *Left-Click on NEW EXPEDITION to enter game area.*
2. *Press "X" to open the SETTINGS Menu*
3. *Left-Click on VIDEO to open the video settings menu.*
4. *Left-Click on WINDOW MODE and select WINDOW*
5. *Left-Click on RESOLUTION and select a lower resolution.*
6. *Left-Click on SAVE SETTINGS to save the settings.*
7. *Left-Click and hold on the white Title Bar at the top of the window and drag the window to your desired monitor.*
8. *Go back to VIDEO SETTINGS to adjust to your desired Resolution level.*

Tip: Beware of Dead-zones. You will die.
