

HYPER GALACTICA

The year is 2175. For more than a century, water and black gold have been the cause of many conflicts on Earth. Now, a new world order has been established and conflicts are a thing of the past.

But, a new menace, this time from Space, awaits us.
In 2152, we spotted suspicious spaceships approaching our planet. Following a few intimidating gestures on our part, they left our solar system and galaxy.

Today, however, they are back in force!.
Are they after our water, our oil or other earthly resources?
Do they want to colonise our planet?
The fact is, they have already destroyed a number of our spaceships and chaos seems imminent.

Only your fleet and you can repel this invasion.

The future of all humanity is in your hands!

1. Install HYPER GALACTICA

You have nothing to do: Steam will install the product (made in Java) for you.

2. Setting

You have the possibility to use the game Hyper Galactica with:

- a gamepad (XBOX, ...)
- or a keyboard.

***With an Azerty or Qwerty keyboar*d**

Run the game with Steam!

With a joystick

- First, connect the joystick ("wired" case) or turn it on (case "wireless")
- Then run the game with Steam. It is important to start the game after activating the gamepad. If not, the joystick will be inactive and you will be in Keyboard mode.

3. Use

This version of HYPER GALACTICA is dedicated to Personal Computers. You can play it with a joystick (plug it BEFORE running the game) or a keyboard (Azerty or Qwerty).

The complete game has 12 levels of increasing difficulty. As the position and movement of the enemy spacehips is random, the game combinations are INFINITE !

The objective of the game is, with the help of your spaceship, to destroy the enemy spaceships before they destroy us. When an enemy spaceship explodes, aliens are ejected into Space. And you further improve your score if you destroy them too.

Enemy spaceships are unpredictable in their movements and attacks and sometimes stealth. Planets, asteroids, black holes, magnetic fields, stars and pinballs must be avoided too.

If you are successful in destroying enemy spaceships and aliens, you can reach a BONUS which will allow you to launch fragmentation missiles, very efficient missiles for improving your score.

You can launch missiles and also activate shields. Reload them by bringing your spaceship into contact with supply stations identified by small stars, orange (missiles) or blue (shields).

As you progress in the game, black holes, stars and pinballs loose their visibility. So, memorise their positions to avoid nasty surprises when you are moving!

At the end, in addition to destroying enemy ships, your goal is also to exceed the reference scores defined under https://www.hyper-galactica.com/scores-android-windows.html.
To do this, try to reach the bonuses in the shortest time, to destroy the maximum of enemy ships and their aliens. You can then inform us of your victory in the scores so that we update the page concerned.

Right, it's UP TO YOU!

4. Possible problems

The installation kit allows you to start the game easily. Nevertheless, you may sometimes meet the following problems:

1) Joystick (XBOX, ...)

You cannot move your spaceship with the joystick. Here is the procedure:

a) Make sure your Windows operating system is one of them:

Windows 10; Windows 7 Service Pack 1; Windows 8; Windows 8.1; Windows Server 2003, Service Pack 2; Windows Server 2008 R2 SP1; Windows Server 2008 Service Pack 2; Windows Server 2012; Windows Vista Service Pack 2; Windows XP Service Pack 3

b-1) If it is not in the list, upgrade your operating system before installing the game.

b-2) If it is one among those operating systems, the problem could come from your gamepad that does not have its driver installed (or updated). Find it then among more than 86 TLD references from: https://www.touslesdrivers.com/index.php?v_categorie=19&v_page=10

2) Java for Windows 64 bits

Hyper Galactica is made in Java for Windows 64 bits, only. Theerfore, the game and Windows 32 bits are not compatible.
